GOVERNMENT OF GOA

REPORT

ON

HOUSEHOLD CONSUMER EXPENDITURE

IN GOA

NATIONAL SAMPLE SURVEY
63rd ROUND
(July 2006 – June 2007)
State Sample

DIRECTORATE OF PLANNING, STATISTICS & EVALUATION , PANAJI – GOA.

PREFACE

The National Sample Survey Organization (NSSO) Government of India undertakes annual surveys on various socio economic aspects in the economy. The 63rd round of NSS was held during the period July 2006 to June 2007. The subjects covered in the survey are Service sector enterprise (Excluding Trade) and consumer expenditure.

This report gives findings in respect of Household Consumer Expenditure based on state sample. It is presumed that report will be highly useful to researchers, planners and Policy makers etc.

This Directorate is extremely thankful to the NSSO, Government of India, New Delhi for providing guidance and conduct of survey. Thanks are also due to Data Processing Centre, Kolkata for providing the software's for data entry, validation & tabulation of data. Thanks are also due to the NIC, Goa state unit, especially Shri Ramnathan, System Analyst for providing excellent technical support in validating the data & generation of tables.

The excellent efforts put in by the officers & staff of NSS division of this Directorate in the field work, data entry, validation, generation of tables & report writing is highly appreciated. Readers are requested to give constructive suggestions if any, for improving the report in future.

Place : Panaji *(Anand Sherkhane)*
Date :09/01/2011 *DIRECTOR*

Chapter One

Introduction and Survey Design

Introduction

The National Sample Survey Organization (NSSO), Government of India collects socio-economic data employing scientific sampling methods on various subjects and parameters through its annual rounds. The survey is conducted separately by the Central Government for central sample and by the State Government for state sample. In case of Goa the survey in respect of State Sample is conducted by the National Sample Survey Division in the Directorate of Planning, Statistics and Evaluation. This report pertains to the 63rd round of National Sample Survey (NSS) conducted in Goa during the period July 2006 to June 2007.

Subject Coverage

The 63rd round (July 2006 - June 2007) of NSS was earmarked for collection of data on economic and operational characteristics of enterprises in service sector (excluding trade) and also on household Consumer expenditure. All service sector enterprises, which were not covered under the Annual Survey of Industries (ASI), were under coverage of the survey. Government and public sector undertakings were not under survey coverage. Last survey of service sector enterprises was conducted in the 57th round of NSS during July 2001 to June 2002. The 63rd round was basically a repetition of the 57th round survey in terms of concepts and definitions. However, financial sector has been included in the coverage of 63rd round.

Period of survey and work programme

The period of survey will be of one year duration starting on 1st July 2006 and ending on 30th June 2007. The survey period of this round will be divided into four sub-rounds of three months duration each as follows:

sub-round 1 : July - September 2006

sub-round 2 : October - December 2006

sub-round 3 : January - March 2007

sub-round 4 : April - June 2007

Schedules of enquiry

The following schedules of enquiry were canvassed:

Schedule 0.0 : list of households and non-agricultural enterprises

Schedule 2.345 : service sector enterprises (excluding trade)

Schedule 1.0 : consumer expenditure

State Sample size

The villages in rural areas and UFS blocks in urban areas included in the sample are called as First Stage Units (FSU). The size of State sample for Goa was 60 FSUs comprising 24 FSUs in rural and 36 FSUs in urban areas. In each of the four sub-rounds, equal number of sample villages/blocks (FSUs) were allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period.

Data Presented in this Report

This report pertains to House Hold Consumer Expenditure based on State Sample. It gives the estimates monthly per capita consumer expenditure, monthly per capita quantity consumed, averages of monthly per capita consumer expenditure, important heads of consumption, etc.

Chapter Two

Survey Procedure

Sample design

A stratified multi-stage sampling procedure was adopted in the 62nd Round survey. The first-state units (FSU) were the 2001 census villages in the rural sector and Urban Frame Survey Blocks in the urban sector. The ultimate stage units in both sectors, were households. In the case of large villages/blocks, hamlet groups (hg)/ sub-blocks (sb) were formed.

Sampling Frame for First Stage Units

For the rural sector the list of 2001 census villages constituted the sampling frame. For the urban sector, the list of latest available Urban Frame Survey (UFS) blocks was considered as sampling frame.

Selection of hamlet-groups/ sub-blocks/ households/ enterprises - important steps

(i) Proper identification of the FSU boundaries

The first task of the field investigators was to ascertain the exact boundaries of the sample FSU as per its identification particulars given in the sample list. For urban samples with UFS blocks, the boundaries of each Urban Frame Survey (UFS) block was identified by referring to the map corresponding to the frame code specified in the sample list.

(ii) Formation of segment 9

Having determined the boundaries of the sample FSU, all non-agricultural enterprises having 50 or more workers in the entire FSU and having operated at least one day during last 365 days preceding the day of survey (hereinafter to be called as big enterprises for brevity) were listed and all the eligible units under coverage were surveyed. All the listed big units (whether under coverage or not) constituted segment 9. All eligible enterprises under coverage were surveyed in segment 9.

(iii) Criterion for hamlet-group/ sub-block formation

Having constituted segment 9 as stated above, the next step was formation of 'hamelet-groups in rural areas and sub-blocks in urban areas. For this, approximate present population (P) and approximate total number of on agricultural enterprises (E) for the whole FSU was ascertained first from knowledgeable persons. Depending upon the values of 'P' and 'E', it was divided into a suitable number (say, D) of 'hamlet-groups' in the rural sector and 'sub-blocks' in the urban sector as stated below.

population (P)	no. of hgs/ sbs to be formed	no. of non-agricultural enterprises (E)	no. of hgs/ sbs to be formed
less than 1200	1	less than 120	1
1200 – 1599	4	120 - 159	4
1600 – 1999	5	160 – 199	5
2000 - 2399	6	200 - 239	6
and so on	…	and so on	…

However, while considering enterprise criteria, segment 9 enterprises, were excluded i.e. the value of 'E' above were adjusted in respect of the number of enterprises in segment 9.

(iv) Formation of hamlet-groups/ sub-blocks

Hamlet-groups/ sub-blocks were formed in the sample FSU by more or less equalizing population ensuring that the hamlet-groups/ sub-blocks formed were clearly identifiable in terms of physical landmarks.

Listing of households/ enterprises

Having determined the area(s) to be considered for listing, the next step was to list all the households and non- gricultural enterprises (NAEs).

Formation of Second Stage Strata and allocation of households for schedule 1.0:

For rural sector in each selected village/ segments, three second stage strata (SSS) namely SSS 1, SSS 2 & SSS 3 were formed. Households with any member who worked for at least one day in any public works scheme of Government during last 365 days constituted SSS 1.

Out of the remaining households SSS 2 and SSS 3 were formed on the basis of land possessed by household.

A cut-off point 'X' (in hectares) was determined at State/UT level from NSS 59th round data in such a way that top 20% of the rural households possessed land equal to or more than X. Out of the remaining (other than SSS 1) households all the listed households possessing land less than X constituted SSS 2 and the rest of the households constituted SSS 3.

For urban sector in each selected block/ segments, two second stage strata (SSS) namely SSS 2 & SSS 3 (there is no SSS 1 for urban sector) were formed on the basis of household MPCE. In the urban sector, a cut-off point 'A' (in Rs.) was determined at NSS state-region level from NSS 61st round data in such a way that top 20% of the households had MPCE equal to or more than 'A'. All the listed households with MPCE less than 'A' constituted SSS 2 while the rest of the households constituted SSS 3.

The number of households to be surveyed for schedules 1.0 is 6 in a rural FSU and 4 households in an urban FSU.

Composition of SSS with number of households surveyed for schedule 1.0 was as follows.

SSS	composition of SSS	number of households to be surveyed for schedule 1.0	
		without hg/ sb formation	with hg/ sb formation (for each segment)
rural			
SSS 1:	households with at least one member who worked for at least one day in any public works scheme during last 365 days.	2	1
SSS 2:	Of the remaining hhs.; households with land possessed < X	2	1
SSS3	other households	2	1
urban			
SSS 2:	households with MPCE < A	2	1
SSS 3:	other households	2	1

Selection of households for Schedules 1.0

From each SSS the sample households for schedule 1.0 were selected by SRSWOR.

Shortfall of households to be compensated: For schedule 1.0, shortfall of households in the frame of any particular SSS was compensated from the same SSS of the other segment or from the other SSS of the same or other segment where additional household(s) are available. The procedure adopted was follows:

step 1: Allocate the required number of households to each SSS wherever possible and identify the SSS having shortfall.

step 2: In case of hg/ sb formation, compensate from the same SSS of the other segment if available for all the SSS having shortfall. If the shortfall still remains identify the SSS having shortfall and go to Step 3.

step 3: Find the SSS where additional households are available following the priority order of SSS 1, SSS 2, & SSS 3 and compensate.

The above steps for compensation are presented in the following table.

for rural:

SSS having shortfall (Schedule 1.0)	priority order of SSS for compensation
1	2, 3
2	1, 3
3	1, 2

If there is hg/ sb formation, for each SSS as per priority order, compensation was made from the segment where shortfall occurs, failing which from other segment and so on.

For **urban** the same procedure was adopted except that choice was limited to SSS 2 and SSS 3 only.

Chapter Three

Concepts & Definitions

Important concepts and definitions used in different schedules of this survey are explained below.

House: Every structure, tent, shelter, etc. is a house irrespective of its use. It may be used for residential or non-residential purpose or both or even may be vacant.

Household: A group of persons normally living together and taking food from a common kitchen will constitute a household. The members of a household may or may not be related by blood or marriage to one another. The following cases are to be noted while determining the group of persons to be considered as households for the current survey:

(i)Each inmate (including residential staff) of a hostel, mess, hotel, boarding and lodging house, etc., will constitute a single member household. If, however, a group of persons among them normally pool their income for spending, they together will be treated as forming a single household. For example, a family living in a hotel will be treated as a separate single household by itself.

(ii) Under-trial prisoners in jails and indoor patients of hospitals, nursing homes etc., are to be excluded, but residential staff therein will be listed while listing is done in such institutions.

The persons of the first category will be considered as normal members of their parent households and will be counted there. Convicted prisoners undergoing sentence will be outside the coverage of the survey.

(iii) Floating population, i.e., persons without any normal residence will not be listed. But households residing in open space, roadside shelter, under a bridge etc. more or less regularly in the same place will be listed.

(iv) Foreign nationals will not be listed, nor their domestic servants, if by definition the latter belong to the foreign national's household. If, however, a foreign national becomes an Indian citizen for all practical purposes, he/ she will be covered.

(v) Persons residing in barracks of military and paramilitary forces (like police, BSF etc.) will be kept outside the survey coverage for difficulty in conduct of survey therein. However, civilian population residing in their neighbourhood, including the family quarters of service personnel are to be covered, for which, of course, permission may have to be obtained from appropriate authorities.

(vi) Orphanages, rescue homes, ashrams and vagrant houses are outside the survey coverage. However, the persons staying in old age homes, the students staying in ashram/ hostels and the residential staff (other than monks/ nuns) of these ashrams may be listed. For orphanages, although orphans are not to be listed, the persons looking after them and staying there may be considered for listing.

Household size: The number of normally resident members of a household is its size. It will include temporary stay-aways (those whose total period of absence from the household is expected to be less than 6 months) but exclude temporary visitors and guests (expected total period of stay less than 6 months). Even though the determination of the actual composition of a household will be left to the judgment of the head of the household, the following procedures will be adopted as guidelines:

(i) In deciding the composition of a household, more emphasis is to be placed on 'normally living together' than on 'ordinarily taking food from a common kitchen'. In case the place of residence of a person is different from the place of boarding, he or she will be treated as a member of the household with whom he or she resides.

(ii) A resident employee, or domestic servant, or a paying guest (but not just a tenant in the household) will be considered as a member of the household with whom he or she resides even though he or she is not a member of the same family.

(iii) When a person sleeps in one place (say, in a shop or in a room in another house because of space shortage) but usually takes food with his or her family, he or she should be treated not as a single member household but as a member of the household in which other members of his or her family stay.

(iv) If a member of a household (say, a son or a daughter of the head of the household) stays elsewhere (say, in hostel for studies or for any other reason), he/ she will not be considered as a member of his/ her parent's household. However, he/ she will be listed as a single member household if the hostel is listed.

Pucca structure: A pucca structure is one whose walls and roofs are made of pucca materials such as cement, concrete, oven burnt bricks, hollow cement/ ash bricks, stone, stone blocks, jack boards (cement plastered reeds), iron, zinc or other metal sheets, timber, tiles, slate, corrugated iron, asbestos cement sheet, veneer, plywood, artificial wood of synthetic material and poly vinyl chloride (PVC) material.

Katcha structure: A structure which has walls and roof made of non-pucca materials is regarded as a katcha structure. Non-pucca materials include unburnt bricks, bamboo, mud grass, leaves, reeds, thatch, etc. Katcha structures can be of the following two types:

(a) **Unserviceable katcha structure** includes all structures with thatch walls and thatch roof i.e. walls made of grass, leaves, reeds, etc. and roof of a similar material and

(b) **Serviceable katcha structure** includes all katcha structures other than unserviceable katcha structures.

Semi-pucca structure: A structure which cannot be classified as a pucca or a katcha structure as per definition is a semi-pucca structure. Such a structure will have either the walls or the roof but not both, made of pucca materials.

Dwelling unit: It is the accommodation availed of by a household for its residential purpose. It may be an entire structure or a part thereof or consisting of more than one structure. There may be cases of more than one household occupying a single structure such as those living in

independent flats or sharing a single housing unit, in which case, there will be as many dwelling units as the number of households sharing the structure. There may also be cases of one household occupying more than one structure (i.e. detached structures for sitting, sleeping, cooking, bathing etc) for its housing accommodation. In this case, all the structures together constitute a single dwelling unit. In general, a dwelling unit consists of living room, kitchen, store, bath, latrine, garage, open and closed veranda etc. A structure or a portion thereof used exclusively for non-residential purposes or let out to other households does not form part of the dwelling unit of the household under consideration. However, a portion of a structure used for both residential and non-residential purposes is treated as part of the dwelling unit except when the use of such portion for residential purpose is very nominal. The dwelling unit covers all pucca, semi-pucca and katcha structures used by a household. Households living more or less regularly under bridges, in pipes, under staircase, in purely temporary flimsy improvisations built by the road side (which are liable to be removed at any moment) etc., are considered to have no dwelling.

Independent house: An independent house is one which has a separate structure and entrance with self-contained arrangements. In other words, if the dwelling unit and the entire structure of the house are physically the same, it should be considered as an independent house. In some parts, particularly in rural areas, two or more structures together may constitute a single housing unit. While the main residence may be in one of the structures, the other structures may be used for sleeping, sitting and for store, bath etc. In all such cases, all the structures together will form a single housing unit and will be treated as an independent house.

Flat: A flat, generally, is a part of the building and has one or more rooms with self contained arrangements and normal housing facilities like water supply, latrine, toilet, etc., which are used exclusively by the household residing therein or jointly with other households. It also includes detached room or rooms with or without other housing facilities.

Land possessed: The area of land possessed will include land ‘owned’, ‘leased in’ and ‘land neither owned nor leased in’ (i.e. encroached) by the household but exclude land 'leased out'. The total land area possessed by the household as on the date of survey is taken into account. A piece of land is considered to be owned by the household if permanent heritable possession with or without the right to transfer the title vests in a member or members of the household.

Land held in owner-like possession say, under perpetual lease, hereditary tenure, long-term lease for 30 years or more, etc., will also be considered as land owned. For a piece of land under the possession of the household, if the household lacks title of ownership and also does not have lease agreement for the use of land transacted, either verbally or in writing, such land will be considered as 'neither owned nor leased in'. In collecting information regarding land possessed, the actual position as obtained on the date of survey will be considered. It may be noted that the 'area of land possessed' to be recorded should not include the area of land owned, leased-in, etc. by the servants/ paying guests who are considered as normal members of the household.

Household monthly per capita expenditure: Household consumer expenditure is measured as the expenditure incurred by a household on domestic account during a specified period, called reference period. It also includes the imputed values of goods and services, which are not purchased but procured otherwise for consumption. In other words, it is the sum total of monetary values of all the items (i.e. goods and services) consumed by the household on domestic account during the reference period. The imputed rent of owner occupied houses is excluded from consumption expenditure. Any expenditure incurred towards the productive enterprises of the households is also excluded from the household consumer expenditure. Monthly per capita expenditure (MPCE) is the household consumer expenditure over a period of 30 days divided by household size. A person's MPCE is understood as that of the household to which he/ she belongs.

Meal: A 'meal' is composed of one or more readily eatable (generally cooked) items of food, the usually major constituent of which is cereals. The meals consumed by a person twice or thrice a day provide him/ her the required energy (calorie) and other nutrients for living and for pursuing his/ her normal avocations. A 'meal', as opposed to 'snacks', 'nashta' or 'high tea', contains larger quantum and variety of food. In rare cases, a full meal may contain larger quantity of non-cereal food. Even then, if the quantum of food in a plate is heavy as a meal, the contents of the food plate will also be considered as a 'meal' Sometimes the contents of a 'nashta' may not be very different from the contents of a 'meal'. The difference in quantity will therefore be the guiding factor for deciding whether the plate is to be labelled as a 'meal' or a 'nashta'.

A person rendering domestic service (like cleaning utensils, dusting and cleaning of rooms, washing linen, carrying water from outside, etc.) to a number of households during the daytime gets some food from each of the households he/ she serves. Although the quantum of food received from a single household may, by quantity, be far less than a full meal, the total quantity of food received from all the households taken together would often, if not more, be at least equivalent to a full meal. In this particular situation, the person will be considered to be consuming one meal every day under 'meal taken away from home'. Subject to the guidelines given in the two preceding paragraphs, for the purpose of data collection on 'number of meals consumed' one has to depend on the judgement of the informant because, the informant would reckon the number on the basis of his/ her own understanding of the concept of a meal/ khana.

P.D.S.: This stands for Public Distribution System, which means the distribution of some essential commodities by the government at subsidised rates through ration shops, fair price shops and control shops. These shops may be owned by the government, local government, a government undertaking, the proprietor of a firm, co-operatives or private persons (individually or jointly) or other bodies like club, trust, etc. The following points may be noted while classifying a *purchase* as "PDS" or otherwise.

- "Super Bazaars" and co-operative stores will not generally be included under public distribution system. However, when these also sell rationed commodities at controlled prices against ration cards, they will be taken as ration shops for particular commodities.
- For kerosene, "PDS" will also include kerosene depots selling kerosene at controlled prices.
- Distribution of some controlled price commodities such as kerosene may in some areas be made without a system of presentation of ration card. Except in such situations, a purchase which is not made against a ration card will not qualify as a PDS purchase.
- A purchase will be considered as "PDS" irrespective of whether the household uses its own ration card or that of some other household.
- • Purchase from PDS shops at prices higher than the PDS prices will also be considered as purchase from PDS as long as the price paid is perceptibly lower than the market price. (This is a departure from the practice followed in earlier rounds.)

Chapter Four

Survey Findings

Consumption pattern of Cereals in Quantity

The quantity of consumption of cereals (in kg) per person for a period of 30 days for each MPCE class and their corresponding share in percentages in rural areas is given in table 1 and 2 respectively. Similarly, the quantity of cereals consumed per person for a period of 30 days for each MPCE class and their corresponding share in percentages in urban is given in table 3 and 4 respectively. The item wise consumption of cereals for the State of Goa is given in table 5.

Table 1: Quantity of Consumption (Kg 0.00) of Cereals per person for a period of 30 days for each MPCE class

RURAL

MPCE Class (Rs)	Item (Consumption in Kg)					
	Rice	Wheat	Jowar	Barley	Ragi	Total Cereals
0-235	0.000	0.000	0.000	0.000	0.000	0.000
235-270	0.000	0.000	0.000	0.000	0.000	0.000
270-320	0.000	0.000	0.000	0.000	0.000	0.000
320-365	0.000	0.000	0.000	0.000	0.000	0.000
365-410	0.000	0.000	0.000	0.000	0.000	0.000
410-455	0.000	0.000	0.000	0.000	0.000	0.000
455-510	0.000	0.000	0.000	0.000	0.000	0.000
510-580	10.000	2.400	0.000	0.000	0.000	12.400
580-690	5.993	1.264	0.849	0.000	0.148	8.254
690-890	5.132	2.547	0.000	0.000	0.085	7.764
890-1155	6.198	2.540	0.139	0.000	0.226	9.103
1155 & more	7.003	2.929	0.065	0.000	0.156	10.152
All	6.608	2.759	0.096	0.000	0.162	9.626
No. of HHs per 1000	992	1000	54	0	280	1000

It is evident from table 1 that there were no households in rural areas with monthly per capita consumption expenditure of less than Rs.510 per person. This may be attributable to the reasonably high per capita income in the State. It may be seen from table 1 that the average monthly per capita consumption of cereals per person in rural areas was 9.626 kg

and the highest being in the MPCE class of Rs.510-580 (12.400 kg) followed by MPCE class of Rs.1155 & more (10.152 kg).

Table 2: Percentage share in quantity of Consumption of Cereals per person for a period of 30 days for each MPCE class

RURAL

MPCE Class (Rs)	Item (percentage share in quantity consumed)					
	Rice	Wheat	Jowar	Barley	Ragi	Total Cereals
0-235	0.00	0.00	0.00	0.00	0.00	0.00
235-270	0.00	0.00	0.00	0.00	0.00	0.00
270-320	0.00	0.00	0.00	0.00	0.00	0.00
320-365	0.00	0.00	0.00	0.00	0.00	0.00
365-410	0.00	0.00	0.00	0.00	0.00	0.00
410-455	0.00	0.00	0.00	0.00	0.00	0.00
455-510	0.00	0.00	0.00	0.00	0.00	0.00
510-580	80.65	19.35	0.00	0.00	0.00	100.00
580-690	72.61	15.31	10.29	0.00	1.79	100.00
690-890	66.10	32.81	0.00	0.00	1.09	100.00
890-1155	68.09	27.90	1.53	0.00	2.48	100.00
1155 & more	68.98	28.85	0.64	0.00	1.54	100.00
All	68.65	28.66	1.00	0.00	1.68	100.00
No. of HHs per 1000	992	1000	54	0	280	1000

It may be observed from table 2 that in rural areas in the basket of items of cereals major consumption was of rice (68.65%) and the trend was similar in all the MPCE class. This was followed by consumption of wheat (28.66%) and share of consumption of jowar and ragi was found negligible. It may also be noted that almost all the households in rural areas were found to be consuming both rice and wheat while the household consuming jowar and ragi were found to be only 5.4% and 28.0% respectively.

It may be seen from table 3 that like in rural areas in urban areas too there were no households with monthly per capita consumption expenditure of less than Rs. 580 per person. The average monthly per capita consumption of cereals in urban areas (9.749 kg) was found to be marginally higher than rural areas. The highest average consumption of cereals was found in the MPCE class of Rs. 675-790 (11.200 kg) followed by the MPCE class of Rs.1880-2540 (10.681 kg) and MPCE class of Rs.2540 & more (10.427 kg).

Table 3: Quantity of Consumption (Kg 0.00) of Cereals per person for a period of 30 days for each MPCE class

URBAN

MPCE Class (Rs)	Item (Consumption in Kg)					
	Rice	Wheat	Jowar	Barley	Ragi	Total Cereals
0-335	0.000	0.000	0.000	0.000	0.000	0.000
335-395	0.000	0.000	0.000	0.000	0.000	0.000

No. of HHs per 1000	1000	1000	97	0	86	1000

It is evident from table 4 that like in rural areas in urban areas too rice was the major cereal consumed by the people. However, the percentage share of rice consumption in urban areas was slightly lower than the rural areas and on the other hand the consumption of wheat was slightly higher in urban areas. As in rural areas consumption of ragi and jowar in urban areas was negligible

Table 5: Quantity of Consumption (Kg 0.00) of Cereals per person for a period of 30 days

GOA

Sl.No.	Item	Consumption in kgs	Percentage share	No. of households per 1000
1	Rice	6.491	67.01	996
2	Wheat	3.080	31.80	1000
3	Jowar	0.110	1.14	75
4	Ragi	0.096	0.99	186
5	Total Cereals	9.686	100	1000

It may be seen from table 5 that among cereals rice was the major item being consumed in Goa. The consumption of rice per person for a period of 30 days was 6.491 kgs which works out 216 gms per person per day. The consumption of wheat was 3.080 kgs per person for 30 days which works out 103 gms per person per day. The consumption of Jowar and Ragi was found to be negligible.

Consumption pattern of Cereals in Value

The value of consumption of cereals (in Rupees) per person for a period of 30 days for each MPCE class and their corresponding share in percentages in rural areas is given in table 6 and 7 respectively. Similarly, the value of cereals consumed per person for a period of 30 days for each MPCE class and their corresponding share in percentages is given in table 8 and 9 respectively. The item wise value of consumption of cereals for the state of Goa is given in table 10.

Table 6: Value of Consumption (Rs. 0.00) of Cereals per person for a period of 30 days for each MPCE class

No. of HHs per 1000	992	1000	54	0	280	1000

It may be observed from table 6 that the monthly per capita consumption expenditure on cereals in rural areas was Rs. 146.23 and the highest MPCE on cereals was found in the MPCE class Rs.1155 & more and the lowest being in the MPCE class Rs.690-890. The highest value of consumption among cereals was found in case of rice being Rs.89.13 followed by wheat (Rs. 54.56) and value of jowar and ragi was found to be negligible.

It may be seen from table 2 and table 7 that while the percentage share of rice in terms of quantity was higher than its share in terms of value, the percentage share of wheat in terms quantity was lower than its share in terms of value. This variation was due to the cost per kg of wheat (Rs.19.78) being higher than the cost of rice per kg (Rs.13.48).

Table 8: Value of Consumption (Rs. 0.00) of Cereals per person for a period of 30 days for each MPCE class

URABN

MPCE Class (Rs)	Item (Value of consumption in Rupees)

No. of HHs per 1000	1000	1000	97	0	86	1000

It may be seen from table 8 that the MPCE on cereals in urban areas was higher than the rural areas. The MPCE on cereals in urban areas (Rs.158.50) comprised Rs.86.95 for rice, Rs.69.96 for wheat and the MPCE in respect of jowar and ragi was negligible. The highest MPCE on cereals was found in the MPCE class Rs.2540 & more (Rs.188.94) and the lowest was in the MPCE class Rs. 580-675 (Rs.67.33).

As regards the percentage share in value of consumption of cereals it may be observed from table 9 that like in rural areas in urban areas too the cost per kg of wheat (Rs.20.52) was higher than rice (Rs. 14.06).

Table 10: Value of Consumption (Rs. 0.00) of Cereals per person for a period of 30 days

GOA

Sl.No.	Item	Value of Consumption in Rs.	Percentage share	No. of households per 1000
1	Rice	88.06	57.82	996
2	Wheat	62.16	40.82	1000
3	Jowar	1.11	0.73	75
4	Ragi	0.96	0.63	186
5	Total Cereals	152.29	100	1000

It may be seen from table 10 that the MPCE on cereals per person for a period of 30 days was Rs.152.29, which comprised rice as major component being 57.82 per cent followed by wheat (40.82%) and the share of jowar and ragi was found to be negligible.

Monthly per capita consumer expenditure of Food Group

The basket of food items covered in the survey include cereals, gram, cereal substitutes pulses and pulse products, milk and milk products, edible oil, egg, fish and meat, vegetables, fruits fresh, fruits dry, sugar salt, spices and beverages. The MPCE of various items covered in the Food group in rural areas for different MPCE class and their corresponding share in percentages is given in tables 11 & 12 respectively. The MPCE of food items in urban areas for different MPCE class and their corresponding share in percentages is given in table 13 and 14 respectively. The MPCE of food items for the State of Goa is given in table 15

Table 11: Monthly per Capita Consumer Expenditure (Rs.0.00) of Food Item for each MPCE Class

Total Food Expenditure	0.00	346.80	323.33	361.36	524.81	772.76	664.46	1000

It may be observed from table 11 that the MPCE of Food Group in rural areas was Rs.664.46. As mentioned elsewhere in the report, it may be noted that there are no households in with MPCE of less than Rs.510. With in the Food group, the highest MPCE was in respect of item ‘cereals’ being Rs.146.23. The MPCE in respect of other items was ‘egg, fish & meat’ (Rs.138.78) followed by fruits–fresh (Rs.71.33), milk &

milk products (Rs.70.38), beverages (Rs.66.50), vegetables (Rs.56.95), edible oil (Rs.38.99), spices (Rs.27.43), pulse & pulse products (Rs.26.22), sugar (Rs.15.83), gram (Rs.2.51), salt (Rs.2.45) and fruits-dry (Rs.0.86). It may also be noted that the highest MPCE of Food group in rural areas was in the MPCE class 'Rs.1155 and more' being Rs.772.76.

As regards percentage share of MPCE of food items in different MPCE class, table 12 reveals that there was significant variation in consumption of cereals in different MPCE class and the range being 22.01% to 35.76%. Trend indicates that lower the MPCE class higher was the percentage share of cereal consumption. Similar is the trend in case of item 'egg, fish& meat' and the percentage share was in the range of 9.15% to 23.48%. However, in respect of all other items, the variation in the share of MPCE among different MPCE class was not too high.

Table 13: Monthly per Capita Consumer Expenditure (Rs.0.00) of Food Item for each MPCE Class.

It is evident from table 13 that the MPCE of Food Group (including cereals and gram) in urban areas was Rs. 704.56. As mentioned earlier in this report there were no households with MPCE less than Rs. 580.00 With in the Food group, the highest MPCE was in respect of item ‘cereals’ being Rs. 158.50 followed by ‘egg, fish and meat’ (Rs.141.28), milk and milk products (Rs.93.23), fruits-fresh (Rs.66.51), beverages (Rs.64.49), vegetables (Rs.57.77), edible oil (Rs.40.35), spices (Rs.29.58), pulse & pulse products (Rs.29.16), sugar (Rs.16.11), gram (Rs.3.55), salt (Rs.2.50) and fruits-dry (Rs. 1.51). It may also be noted that the highest MPCE of Food group in urban areas was in the MPCE class ‘Rs.1155 and more’ being Rs.1095.11.

Like in rural areas, significant variation in the percentage share of MPCE of cereals and ‘egg, fish & meat” among different MPCE class may be seen in table 14. While the percentage share of MPCE in cereals ranged from 17.25% to 40.64%, in ‘egg, fish & meat’ it ranged from 10.13% to 21.75%. The percentage share in case of milk and milk

products too varied significantly among different MPCE class ranging from 4.61% to 16.36%. However, in case of other items the variation was not too high.

Table 14: Percentage share of Monthly per Capita Consumer Expenditure of Food Item for each MPCE Class.

Monthly per capita consumer expenditure of Non-Food Group

The basket of items covered in the non-food group include pan, tobacco, intoxicants, fuel & light, clothing, foot ware, education, medical institutional, medical non-institutional, entertainment, goods for personnel care, toilet articles, sundry articles, consumer articles excluding conveyance, conveyance, rent, taxes & cesses and durable goods. The MPCE in respect of non-food group and corresponding percentage share among different MPCE class for rural areas is given in table 15 and 16 respectively. The MPCE of non-food group and their corresponding percentage share among different MPCE class for urban areas is given in table 17 and 18 respectively.

It may be seen from table 15 that the MPCE of Non-Food Group in rural areas was Rs.895.30. With in the non-Food group, the highest MPCE was in respect of item ‘durable goods’ being Rs.199.37, followed by ‘conveyance’(Rs.156.59), fuel & light

(Rs. 109.05), clothing (Rs.80.22), consumer articles excluding conveyance (Rs.67.00), medical non-institutional (Rs.58.19), toilet articles (Rs.37.84), sundry articles (Rs.33.15), education (Rs.28.91), rent (Rs.27.21) etc It may also be noted that the highest MPCE of non- Food group in rural areas was in the MPCE class 'Rs.1155 and more' being Rs.1116.96.

Table 15: Monthly per Capita Consumer Expenditure (Rs.0.00) of Non Food Item for each MPCE class **RURAL**

Total Non Food Group	220.60	309.99	422.04	516.76	1116.96	895.30	1000

It may be seen from table 16 that there was significant variation in the share of MPCE among different MPCE class in case of items intoxicants, durable goods, clothing, conveyance and medical non-institutional. It may also been seen that out of 18 non-food items in the basket, only 6 items viz. fuel & light, clothing, foot wear, toilet articles, sundry articles and conveyance were used by 100% households. The lowest number of

households per 1000 households was seen in case of item goods for personal care (45) followed by pan (108).

It may be seen from table 18 that there was significant variation in the share of MPCE of non-food group among different MPCE class in case of items fuel & light, clothing and consumer articles excluding conveyance. It may also been seen that out of 18 non-food items in the basket in urban areas, only 4 items viz. fuel & light, clothing, foot wear, and toilet articles were used by 100% households. The lowest number of households per 1000 households was seen in case of item goods for personal care (41) and pan (41) followed by tobacco (84) and intoxicants (149). Thus, it is evident that there was only a small portion of population in the State using pan and tobacco.

Summary of Monthly Per capita expenditure of food and non-food group

The summary of MPCE of food and non-food items for the State of Goa is given in table 19. It is evident from the able that the monthly per capita expenditure for 30 days in Goa was Rs. 1586.07. This comprised Rs.684.25 (43.14%) towards food items and Rs. 901.82 (56.86%) towards non-food items. It is significant to note that the on an average people in Goa spend more towards non-food items than food-items. The percentage share of both food and non-food items in the item basket reveals that the highest expenditure was incurred towards conveyance (10.21%), followed by cereals (9.60%), durable goods (9.29%), egg, fish and meat (8.83%), fuel and light (7.54%), consumer articles excluding conveyance (5.40%), milk and milk product (5.15%), clothing (4.81%), medical non-institutional (4.59%) etc.

Household Characteristics

a. Type of structure of households

The type of structure of the households has been classified as Katcha, Smi-Pucca and Pucca household. Per 1000 distribution of households by type of structure is given in

table 20. It is evident from the table that on whole there were 80.1% pucca households, 17.7% semi-pucca households and only 2.2% of the households were katcha. However, rural-urban comparison reveals that percentage of pucca households were higher in urban areas (82.8%) than rural areas (77.5%). On the other hand the proportion of semi-pucca households was more in rural areas (20.5%) than urban areas (14.7%).

Table 20; Per thousand distribution of households by type of structure

Sl. No.	Type of Structure	Rural	Urban	Combined
1	Katcha	20	25	22
2	Semi-Pucca	205	147	177
3	Pucca	775	828	801
4	Total	1000	1000	1000

b. Occupancy status of dwelling unit

The distribution of households per 1000 by occupancy status of the dwelling unit is given in table 21.

Table 21: Per 1000 distribution of HHs by Occupancy status of the Dwelling Unit:

Type of Dwelling	Rural	Urban	Combined
Owned	794	761	778
Hired	157	191	173
Other	50	48	49
Total	1000	1000	1000

It may be seen from table 21 that overall the occupants of 77.7% of the dwelling units were the owners of the household and 17.3% of the occupants were staying on rent. It may also be observed from rural-urban comparison that the proportion of ownership was slightly higher in rural areas and the proportion of households on rent was more in urban areas.
