GOVERNMENT OF GOA

A REPORT ON

RURAL WAGES

2005-06 AND 2006-07

DIRECTORATE OF PLANNING, STATISTICS AND EVALUATION

PANAJI – GOA.

Preface

This Directorate has been bringing out a brochure on "Rural wages" since 1975-76. The present brochure, which is the twenty eighth in the series of the publication incorporates the data relating to the agricultural year 2005-06 and 2006-07. It presents, as usual, the data on wages paid to workers engaged in various agricultural and non-agricultural operations collected from four selected sample villages in each taluka of the State of Goa. Talukawise and operation wise data on wage payment for different occupations have also been given in Statistical tables and Charts.

The data is broadly indicative of the wage pattern in the rural areas of the State of Goa and the trend of change over a period of time. While constant efforts are being made to reduce the time lag and to make available the results at the earliest, it is hoped that this publication would improve a useful reference for the study of wage pattern prevailing in the rural areas of the state.

I take this opportunity to thank the Village Level Revenue Staff and the Block Level Statistical Assistants, who constitute the primary reporting agency for Rural Wages and the Officers and the Staff of the Co-ordination Division of the Directorate of Planning, Statistics & Evaluation for preparing the report.

Suggestions for improvement of the publication are most welcome.

ANAND SHERKHANE

Introduction

1.1 Agricultural activity in Goa is accounted for about 6.07 % and 4.33% of Gross State Domestic Products (GSDP) at constant prices, for the year 2005-06 and 2006-07 respectively.

The performance of Agricultural sector influences the economy of the State. The share of this sector in Goa is exhibiting a declining trend in State Domestic Product (SDP) over years, but its role remains critical as it provides a sizeable employment to the labour force in the State which fetches wages/livelihood to them. For planned development of agriculture and rural sector, rural wage data has vital significance. The data is also essential for carrying out cost of cultivation studies for analyzing economic pattern of different crops. Availability of reliable information on wages is all the more necessary for the purpose of effective enforcement of the Minimum Wages Act, 1948, which provides the basis for fixation of minimum wage rates in agriculture and other employment in the unorganized sector in rural areas and their periodical revision. The Directorate of Planning, Statistics and Evaluation has been collecting and compiling the relevant data in this regard and bringing out the report annually on rural wages in terms of spatial and temporal variations covering agricultural and some of the rural based non-agricultural operations.

1.2 Scope and Coverage

1.2.1 The monthly data on the rural wages are collected from selected villages of 11 Talukas spread over both the districts of this State at the rate of four villages per Taluka. The data so received are scrutinized, compiled and results are presented in this report. Taluka-wise and operation-wise data on average daily wages, separately for adult male/female are presented in this report for various agricultural and non-agricultural operations, for the agricultural year July 2005 to June 2006 and July 2006 to June 2007.

The list of selected forty four villages from eleven talukas in the two Districts of the State is presented in ***Annexure I***.

1.2.2 Table 1A, 1B (i) and 1B (ii) present the data on daily wages of agricultural labourers engaged in activities connected with cultivation of field crops. Table 2A, 2B (i) and 2-B (ii) presents similar data for plantation crops, such as Coconut, Areca nut, Cashew nut etc. Details of wages of skilled workers mainly comprised of artisans like Blacksmith, Bamboo and Cane worker, Carpenter, Mason, Potter, Stone cutter etc. and for unskilled worker consisting of Cattle grazers, Casual labour etc. are presented in table 3A, 3-B(i) and 3-B(ii) respectively for years 2005-06 and 2006-07.

1.3 Summary of Findings

1.3.1 Field Crops

1.3.1.1 Agricultural Activities

Statement '1A' reveals that District wise distribution of average daily wages in South Goa demanded by rural male or female worker are higher as compared to North Goa for both the year i.e. 2005-06 and 2006-07 except in the ploughing activity for male, harvesting, and threshing activity for female workers. The figures also depicts that the males have earned at least 50% extra wages over the wages earned by female in all the activities except ploughing during any particular year. The overall percentage growth rate for the State during 2006-07 over that of 2005-06 shows that the wages are in increasing trend in most of the activities over the year, with exception to few like digging activity in case of males and harvesting activity in respect of female Workers. The State percentage growth in wages earned by male workers is comparably higher to that of female workers during 2006-07 in most of the activities except digging, manuring, threshing and other activities.

Taluka wise distribution of average daily wages for Agricultural activities earned by males and females 2005-06 and 2006-07 are given in **Table 1B (i) and 1B (ii).**

Chart 1-A-C depicts the growth in all the Agricultural activities at glance.

1.3.1.2 The study indicates that the average daily wages of four selected villages in each taluka received by agricultural labourers during the year 2005-06 and 2006-07 were ranging between Rs. 92 to Rs.275 and Rs.91 to Rs.275 respectively in all activities in case of males and Rs.48 to Rs.118 and Rs.52 to Rs.151 in respect of females respectively as can be seen in Statement 1-B (i) and 1-B (ii). The daily wages received by males and females during both the years in almost all the activities were better paid in Mormugao followed by Salcete and Tiswadi as compared to other Talukas. Among the agricultural operation the average daily wages were predominantly higher for Ploughing, in particular the maximum being Rs. 275 in Tiswadi taluka and the lowest of Rs.148 being in Sanguem taluka for males for 2005-06, while during 2006-07 it was again Tiswadi who paid highest of Rs 275 and lowest of Rs. 178 in Sanguem taluka per day respectively. As far as females are concerned, higher average daily wages were paid for Harvesting activity in 2005-06 and Threshing activity in 2006-07.

1.3.1.3 Child Labour

No child labour was engaged during the year 2005-06 and 2006-07 in any of the Agricultural activities.

1.3.2 Plantation Crop

1.3.2.1 Statement 2-A, analysis distribution of average daily wages in North and South Goa Districts of all the activities in Plantation and the growth in wages over the previous year. It may be seen that in North Goa, the growth in wages earned by males in most of the activities of Plantation except plantation, green manuring, cashew apple and nut collection, coconut dehusking shows a higher trend as compared to females over the previous year. In South Goa, the growth during the year 2006-07 over 2005-06 in male wages have prevailed over female wages in all the activities except Arecanut dehusking. The highest wage earning activity during both the years for male was found to be in harvesting of Arecanut,

Coconut and others, while for females it was green manuring, watering and cashew apple and nut collection. The average growth in wages at State level was observed highest in Toddy tapping followed by Coconut harvesting and Plantation activities for males while it was Green manuring activity which paid highest additional wages over the previous year to the females.

In particular, the average growth in wages over previous year for males was highest in North Goa and was found to be paid for Toddy tapping followed by Arecanut husking, while in South Goa it was Plantation followed by coconut harvesting. In case of females, in Green manuring activity the average growth in wages was higher in North Goa and South Goa as compared to other activities.

The chart 2-A-C depicts the growth in all the plantation activities at a glance.

1.3.2.2. Table 2-B (i) shows distribution of average daily wages for Plantation crops during 2005-06. It is observed that average wages were ranging between Rs. 96 for other dehusking activities in Sattari to Rs. 298 for other harvesting activities in Salcete taluka for men. While in case of women the lowest was Rs.52 for digging the pits and other dehusking activities in Sattari and highest of Rs. 121 for other dehusking activities in Mormugao taluka. As far as the year 2006-07 is concerned the distribution is shown in Statement 2-B (ii). The maximum and minimum wages earned by men were observed as Rs.325 for Coconut harvesting in Mormugao and Rs.90 for watering activities in Sattari taluka, while the women fetched Rs. 120 and Rs.48 for their work in watering in Bardez and Digging pits in Sattari taluka respectively as highest and lowest wages. The analysis within the activity for North and South Goa exhibit that the average wages paid in later District are comparably at a higher side for male as well as females during 2005-06 and 2006-07 subject to few exceptions.

1.3.2.3 Child Labour: No child labour was engaged during the year 2005-06 and 2006-07 in Plantation activity.

1.3.3 Skilled and Unskilled Workers other than Agricultural Labourers

1.3.3.1 Statement 3-A representing average district wise wages and the growth during 2006-07 over 2005-06 for all the non-agricultural activities of Skilled and Unskilled labourers. It reveals that except Bamboo, Cane work and Pot making activity no female member participated in any other skilled activities. Comparing male and female wages at State level it is seen that males were paid higher wages in all the activities comparably. The wages paid to other activities were higher as compared to the earlier year. As far as unskilled workers are concerned, the comparison is mixed type.

The chart 3-A-C depicts the growth in all the activities under Skilled and Unskilled category at a glance.

1.3.3.2 The non-agricultural skilled activities such as Carpentry, Blacksmith and Masonry etc. are also considered for collection of rural wages. The taluka wise distribution for the year 2005-06 and 2006-07 are given in Statement 3-B (i) and 3-B (ii) respectively.

As far as skilled male labourer is concerned, the carpentry and masonry activities demanded the highest average wages during 2005-06 in Tiswadi Taluka is Rs.225 each, while the lowest reported average wages were paid for bamboo and cane work and other activities in Sanguem Taluka Rs.112. In case of females the highest wages reported were Rs.96 in Mormugao for pottery activities and lowest of Rs. 50 in Quepem Taluka for their activities in Bamboo and Cane work.

During 2006-07, in case of skilled male worker, it was masonry activity in Tiswadi taluka with Rs.250 was at leading position, while weavers and other activities in Sanguem at Rs.100 was a cheap paid activity. In case of women, pottery was paid an average wage of Rs 100 per day in Bardez taluka, whereas Rs.50 were paid to bamboo and cane workers in Quepem taluka were found to be highest and lowest paid wages.

The unskilled male workers claimed highest average wages was of Rs. 175 and Rs. 200 per day during 2005-06 and 2006-07 in Tiswadi and Bardez taluka for casual labour and other activities, while female earned average wages to the tune of Rs. 100 and Rs. 110 in Mormugao Taluka for other activity.

1.3.3.3. No data for child labour were recorded in Goa under Skilled and Unskilled category during the year 2005-06 and 2006-07.
