GOVERNMENT OF GOA

A REPORT ON

RURAL WAGES

2003-04 AND 2004-05

DIRECTORATE OF PLANNING, STATISTICS AND EVALUATION

PANAJI – GOA.

Preface

This Directorate has been bringing out a brochure on "Rural wages" since 1975-76. The present brochure which is the twenty seventh in the series of the publication incorporates the data relating to the agricultural year 2003-04 and 2004-05. It presents, as usual the data on wages paid to workers engaged in various agricultural and non-agricultural operations in all the talukas of the State of Goa. Talukawise and operationwise data on wage payment for different occupations have also been given in Statistical tables and chart part. However, the analysis is based on selective village level data which is collected by Talathis from only four sample villages in each Taluka of the State.

The data is broadly indicative of the wage pattern in the rural areas of the State of Goa and the trend of change over a period of time. While constant efforts are being made to reduce the time lag and to make available the results at the earliest, it is hoped that this publication would improve a useful reference for the study of wage pattern prevailing in the rural areas of the state.

I take this opportunity to thank the Village Level Revenue Staff and the Block Level Statistical Assistants, who constitute the primary reporting agency for Rural Wages and the Officers and the Staff of the Co-ordination Division of the Directorate of Planning, Statistics & Evaluation for preparing the report.

Suggestions for improvement of the publication are most welcome.

ANAND SHARKHANE
DIRECTOR

Introduction

1.1 Agricultural activity in Goa is accounted for about 7.6 % and 6.9% of Gross State Domestic Products (GSDP) at constant prices, base year 1999-2000 in 2003-04 and 2004-05 respectively.

The performance of Agricultural sector influences the economy of the State. The share of this sector in Goa is showing a declining trend in SDP over years, but its role remains critical as it accounts for a sizeable employment in the State which fetches wages/livelihood to the laborers. For planned development of agriculture and rural sector, rural wage data has vital significance. The data is also essential for carrying out cost of cultivation studies for analyzing economic pattern of different crops. Availability of reliable information on wages is all the more necessary for the purpose of effective enforcement of the Minimum Wages Act, 1948, which provides the basis for fixation of minimum wage rates in agriculture and other employment in the unorganized sector in rural areas and their periodical revision. The Directorate of Planning, Statistics and Evaluation has been collecting and compiling the relevant data in this regard and bringing out the report annually on rural wages in terms of spatial and temporal variations covering agricultural and some of the rural based non-agricultural operations.

1.2 Scope and Coverage

1.2.1 The monthly data on the rural wages are collected from selected villages of 11 Talukas spread over both the districts of this State, at the rate of four villages per Taluka. The data so received are scrutinized, compiled and results are presented in this report. Taluka-wise and operation-wise data on average daily wages, separately for adult male/female are presented in this report for various agricultural and non-agricultural

operations, for the agricultural year July 2003 to June 2004 and July 2004 to June 2005. The list of selected villages from eleven talukas in the two Districts of the State is presented in Annexure I.

1.2.2 Table 1A, 1B(i) and 1B(ii) present the data on daily wages of agricultural labourers engaged in activities connected with cultivation of field crops. Table 2A, 2B (i) and 2-B (ii) presents similar data for plantation crops, such as coconut, Areca nut, Cashew nut etc. Details of wages of skilled workers mainly comprised artisans like Blacksmith, Bamboo and cane worker, Carpenter, Mason, Potter, Stone cutter etc. and for unskilled worker consisting of Cattle grazers, Casual labour etc. are presented in table 3A, 3-B(i) and 3-B(ii) respectively for years 2003-04 and 2004-05.

1.3 Summary of Findings

1.3.1 Field Crops

1.3.1.1 Agricultural Activities

Statement '1A' reveals that District wise distribution of average daily wages in South Goa demanded by rural male or female worker are higher as compared to North Goa for both the year i.e. 2003-04 and 2004-05 except in the Ploughing activity for both male as well as female. The figures also depicts that the males have always earned at least 35% extra wages over the wages earned by female in all the activities during any particular year. The overall percentage growth rate during 2004-05 over that of 2003-04 shows that the wages are in increasing trend in most of the activities over the year, with exception to few like irrigation activity in case of males and digging activity in respect of female Workers. The State percentage growth in wages earned by female workers is comparably higher to that of a male worker during 2004-05 in most of the activities except digging, transplanting and Harvesting.

Taluka wise distribution of average daily wages for Agricultural activities earned by males and females 2003-04 and 2004-05 are given in Table 1B.

1.3.1.2 The study indicates that the average daily wages received by agricultural labourers during the year 2003-04 and 2004-05 were ranging between Rs. 60 to Rs.267and Rs.97 to Rs.243 in all activities in case of males and Rs.40 to Rs.113 and Rs.47 to Rs.138 in respect of females respectively as can be seen in Statement 1-B(i) and 1-B(ii). The daily wages received by males and females during both the years in almost all the activities were better paid in Mormugao and Salcete as compared to other Talukas. Among the agricultural operation the average daily wages were predominantly higher for Ploughing, in particular the maximum being Rs. 267 in Pernem taluka and the lowest of Rs.130 being in Canacona taluka for males for 2003-04, while during 2004-05 it was Sattari who paid highest of Rs 243 and lowest of Rs. 134 in Canacona taluka per day respectively.

1.3.1.3 **Child Labour**

No child labour was engaged during the year 2003-04 and 2004-05.

1.3.2 Plantation Crop

1.3.2.1 Statement 2-A, analysis distribution of average daily wages in North and South Goa Districts of all the activities in Plantation and the growth in wages over the previous year. It may be seen that in North Goa, the growth in wages earned by females in all the activities of Plantation except Neera extraction shows a higher trend as compared to males over the previous year. The combination in South Goa are mixed type, as the males have prevailed over females in activities like Digging pits, Watering, coconut harvesting, cashew apple & nut collection, Neera extraction, Toddy tapping, Coconut dehusking and others. The highest wage earning activity during both the years for male was found to be Arecanut and Coconut harvesting, while for females it was Toddy tapping and Coconut harvesting in both the Districts. The average growth in wages at State level was observed highest in harvesting other than Arecanut and Coconut activity for males while it was Green manuring activity which paid highest additional wages over the previous year to the females.

In particular the average growth in wages for males was highest in North Goa and was found to be paid for other than Arecanut and Coconut harvesting activities while in case of females it was Green manuring activity.

The chart depicts the growth in all the plantation activities at a glance.

1.3.2.2. Table 2-B (i) shows distribution of average daily wages for Plantation crops during 2003-04. It is observed that average wages were ranging between Rs. 75 for other dehusking activities in Bicholim to Rs. 321 for Coconut harvesting in Quepem talukas for men while in case of women the lowest was Rs. 38 also for other dehusking activities in Bicholim and highest of Rs. 121 for Coconut harvesting in Mormugao talukas. As far as the year 2004-05 is concerned the distribution is shown in Statement 2-B(ii). The maximum and minimum wages earned by men were observed as Rs.350 and Rs.80 for Coconut harvesting in Quepem and other dehusking activities in Bicholim talukas respectively, while the women fetched Rs. 130 and 40 for their work in Toddy tapping in Sanguem and Digging pits and other dehusking in Bicholim talukas as highest and lowest wages respectively. The analysis within the activity for North and South Goa exhibit that the average wages paid in later District are comparably at a higher side for male as well as females during 2003-04 and 2004-05 subject to few exceptions.

1.3.2.3 Child Labour: No child labour was engaged during the year 2003-04 and 2004-05 in Plantation activity.

1.3.3 Skilled and Unskilled Workers other than Agricultural Labourers

1.3.3.1 Statement 3-A representing average district wise wages and the growth during 2004-05 over 2003-04 for all the non-agricultural activities of Skilled and Unskilled labourers, reveals that the percentage growth in average wages in North Goa for women in any skilled activity were better to that of men, the combination observed in South Goa was of contradictory nature exception to stone cutting. The growth seen among average wages in unskilled workers also had no definite trend.

1.3.3.2 The non-agricultural skilled activities such as Carpentry, Blacksmith, and Masonry etc. are also considered for collection of rural wages. The taluka wise distribution for the year 2003-04 and 2004-05 are given in Statement 3-B (i) and 3-B (ii) respectively.

As far as skilled male labourers is concerned the Pottery activity demanded the highest average wages during 2003-04 in Bicholim Taluka, (Rs.232), while the lowest reported average wages were for Blacksmith also in Bicholim Taluka (Rs.96). In case of females the average wages reported were 119 in Mormugao and lowest of Rs 41 in Pernem Taluka for their activities in Bamboo and Cane work.

During 2004-05, in case of skilled male worker it was Carpentry activity in Canacona taluka with Rs. (253) which was at leading position, while Bamboo and cane workers (25) was cheap paid activity. In case of women, Stone cutting was paid an average wage of Rs 100 per day in Sanguem, whereas Rs. 40 in Ponda was paid for Carpentry work, were considered as highest and lowest paid wages.

The unskilled male workers were paid highest average wages of Rs. 150 and Rs. 246 per day during 2003-04 and 2004-05 in Mormugao and Pernem while female earned average wages to the tune of Rs. 86 and Rs. 93 in Salcete Taluka for their casual labour respectively.

1.3.3.3. Child labour under unskilled category were recorded only in Sanguem Taluka, in the activities like Cattle grazing, Washing of clothes and Casual labour during both the years under consideration and were paid nominal wages between Rs 34 to Rs 40 per day.
